
How can I install it? # Where to download the program and what is the registration code? Please, be patient — we will release companion guide with detailed information. You can subscribe to our newsletter to stay tuned. For now we recommend you to use other tools for screencasting: Smartertools, Apowersoft, ShareX etc. #Which features does Icecream Screen Recorder Pro lack compared to the previous version? Technically, Icecream Screen Recorder Pro is an upgrade to Icecream Screen Recorder. The new version offers some extra functionality thanks to our hard work. But, at the same time, Icecream Screen Recorder (the older one) is still capable of doing all things this program will be able to do in future releases. All added features are optional and can be turned off if you don't need them.

The main difference is that Icecream Screen Recorder Pro was designed mainly for professional users who use screencasting regularly (like webinar organizers, training providers etc.). # What is the difference between Icecream Screen Recorder Free and Pro? Icecream Screen Recorder Pro has more features than Icecream Screen Recorder Free. But, at the same time, Icecream Screen Recorder Free has more features than the previous version of the tool. Icecream Screen Recorder Free has all tools that were featured by Icecream screen recorder before. Plus it adds some new exciting functionality. Here are some top benefits of the tool:

Icecream Screen Recorder Pro was designed to satisfy professional users' demands. It is specially for those people who deal with screencasting frequently (like webinar organizers, training providers, etc.). So, you can use Icecream Screen Recorder just for easy recording of any kind of screencasts in realtime. For example, if you are an expert in HTML5 development, you may need to use just our program's built-in CamStudio to record your screencasts in HTML5 format. Since CamStudio is supported by Icecream Screen Recorder Pro, ICSRP won't have any difficulties in converting your recorded files into the format CamStudio requires. The tool features following additional functions:

Icecream Screen Recorder Pro will be able to work with every webcam with the resolution up to 1280x720 pixels. Icecream Screen Recorder Pro will be able to record webinars more effectively. For example, you can use it to record a webinar of more than 100 expert speakers. ICSRP's built-in CamStudio will allow you to record video from each of these speakers' computers. In addition, you will be able to get a several minutes-long footage for each speaker too.

In Icecream Screen Recorder Free any user can only add one screen region on the screen at a time. But in ICSRP Pro any user can add several video regions on the screen and control them separately.
